The MeterSYS® AMI Field Test Program

Water Utilities, Cities, and Counties have many technology choices when considering how they future-proof their investments in connecting smart metering, sensors and IoT devices across their community. In fact, there may be too many choices.

We have designed Field Test packages to make that choice easier and smarter. Our packages limit your financial, resource, and personnel investments while delivering actionable data and a game-plan for making an informed decision.

MeterSYS, an end-to-end smart technology solutions provider to public utilities and governmental agencies, specializes in testing, evaluating and implementing leading metering, sensor, and IoT solutions. SenthiSYS, by MeterSYS, brings to our clients a team of IoT consultants and partners to develop and operate smart city applications. We partner with our clients to leverage advanced IoT and smart technology solutions to solve critical problems, Including aging infrastructure, operational risks, staffing and resource limitations, financial exposures, compliance mandates, and customer/citizen complaints.
